

# How Bhate Geosciences Increased Productivity by Up to 40% with Omnant

Bhate Geosciences, a Birmingham, Alabama-based geotechnical engineering firm, relied on paper-based reporting and spreadsheets that couldn't scale with their growth. This case study shows how the firm adopted Omnant to modernize workflows, eliminate administrative overhead, and drive up to 40% gains in productivity.

## The Challenge

Bhate Geosciences had built its workflows around paper forms and spreadsheets, systems that worked well enough but struggled to keep pace with a growing operation. Technicians were completing reports by hand, transferring data into spreadsheets, which then had to be manually converted into client-ready reports by admin staff.

With hiring already a challenge, the firm needed to reduce its dependence on admin personnel dedicated solely to report generation. The status quo wasn't sustainable, and the team knew it. What they needed was a purpose-built solution that could modernize their workflows without disrupting the nuanced, geography-specific way their operation runs.

## The Approach

1

### Industry-first selection criteria

Bhate compared several platforms on price, features, and industry fit. Omnant stood out because it was built by CMT professionals who had lived the work firsthand, not a generic software team.

2

### Regional workflow configuration

The Omnant team adapted quickly to Bhate's Southeast-specific workflows. Chad's CMT background meant regional nuances were understood immediately, with no lengthy explanations required.

3

### Rapid operational impact

From the first day, the impact was clear. Efficiency improved by up to 40% and the firm consolidated admin responsibilities into a single role.

## The Solution

### Operational efficiency

- Up to 40% increase in productivity
- Admin reporting responsibilities consolidated into one role
- Manual report generation eliminated

### Workflow improvements

- Real-time field visibility from day one
- Faster reporting from field to management
- Single platform replaced paper, spreadsheets, and software

### Platform fit

- Configured for Southeast-specific workflows
- Report formats adapted to Bhate's specs
- Scalable system built for continued growth

### Responsive partnership

- Direct access to Chad, response within the hour
- CMT expertise eliminated lengthy explanations
- A team that understands the business
