

# Equipment Tracking

Don't waste time searching for equipment or missing calibrations. Omnant ensures your testing tools are properly maintained, ready for use, and in the right place for any project.

## The Solution

Managing lab equipment doesn't have to be complicated.

Omnant centralizes calibration schedules, service records, and vendor details, giving your team a single system to track equipment status, ensure compliance, and keep every piece ready for use on critical projects.

## Functionality

### Equipment Location Management

Scan equipment in or out to team members based on their dispatch schedule and job requirements.

### Proactive Maintenance

Keep scheduled maintenance and calibrations on track so your equipment is always ready for action.

### Digital Equipment Documentation

Access essential equipment details anytime, including calibration data, usage procedures, vendor info, and service history.

## Benefits

### Centralize equipment docs

- Store manuals, maintenance records, certificates, and vendor details in one secure cloud system.

### Optimize equipment use

- Track utilization and maintenance costs, and plan service around project schedules to avoid delays.

### Simplify compliance

- Omnant connects your equipment maintenance and testing documentation in one place to make inspections go smoothly.

### Preventative maintenance

- Plan your preventative maintenance without interrupting scheduled work – avoid downtime, extend equipment life, and keep your machines compliant.
