Field Inspections

Unlike basic field inspection tools, Omnant streamlines data collection, reporting, and project management in one powerful field inspection management solution. Simplify your field inspection and reporting process to flow efficiently from the job site to a final report.

The Solution

CMT companies use Omnant's field inspection software to manage on-site evaluations more efficiently.

Omnant's field reporting solution allows your field technicians' reports to be efficiently delivered to your clients without burdening your admin team to retype or send reports.

Functionality

Real-Time Field Reporting
Technicians work with intuitive field inspection forms for swift, accurate, and comprehensive data collection.

Efficient Review Process
Inspectors can send reports to managers for review as soon as they're finished, and they'll be notified as soon as they're approved.

Automated Distribution
Smart notifications replace manual tracking, automatically distributing updates through our field inspection software.

Benefits

Professional reports
- Enable technicians to collect data and send reports from any connected device.

Digital field reports
- Create, review, approve, stamp, and distribute reports entirely online.

Faster delivery
- Digitally deliver field reports to your clients as soon as they are approved in Omnant.

Enhance your field reports
- Capture GPS locations, attach photos, and allow your clients to self-service access their project reports in the Omnant platform.
