

Project Management

Keep your construction materials testing projects organized and your clients informed with centralized documentation, automated report delivery, and real-time coordination across your entire team.

The Solution

Manage every aspect of your construction materials testing projects in one system.

Our project management tools keep your team aligned and clients informed while organizing documentation, scheduling, and distribution throughout the entire project lifecycle.

Functionality

Centralized project document hub

Keep your team aligned and clients informed with project management tools that organize documentation, scheduling, and distribution throughout the testing lifecycle.

Self-service report portal

Strengthen client relationships with dependable report distribution and easy access through a secure self-service portal.

Team coordination

Coordinate your team across scheduling, equipment availability, and deficiency resolution to deliver on time.

Benefits

Document center

- Simplify project management with one secure location for all documents, accessible from the office or job site.

Expense capture

- Free your team from manual email tasks with automated report distribution and a self-service client portal.

Project oversight

- Coordinate projects, people, and equipment efficiently from bidding through inspections, sampling, expenses, and billing.

Mobile access

- Give your team instant access to critical project information wherever they are.
